

Save the Children RIMS

An Information Management System for the MENA Region

Save the Children’s Regional Information Management System (SC RIMS) keeps track of beneficiaries served in the Northern Syria crisis.

Save The Children’s RIMS tool secures data electronically in a multi-sector information management system, and produces tables and graphs to communicate that information visually. The system registers and keeps records of beneficiaries, tracks donor contributions, and helps meet donor disbursement and reporting requirements. Offline data can be captured from desktop or mobile devices, making it possible to gather information even in remote areas.

Features

- Record keeping of beneficiaries
- Robust and reliable electronic system
- Cross sectorial collection of information at field level
- Donor requirement analysis
- Generation of customized reports

Benefits

- Real time evidence based data aids in decision making
- Helps track donor contribution
- Pre and post assessments helps development process
- Offline data capturing through desktop/mobile enable collection of bulk data even in remote areas

Facts

Stakeholders	Save the Children, Jordan
Geographic Area	Middle East region
Time Period	2015-2016
Topics	Child protection, health, education
Tools	Dashboard
Services	Needs assessment; in-country hand-holding; in-country CB workshops
Reference	Snjezana Hansen
Project Admin	Swati Dubey sdubey@communitysystemsfoundation.org

Budget

2016 USD 0.162 million
