

Chemonics FHM Website P2671

Developing the FHM Engage website to support knowledge sharing on local health markets

Community Systems Foundation (CSF), in partnership with Chemonics and funding from the USAID, developed a website that promotes knowledge exchange to strengthen the Frontier Health Markets (FHM) Engage program.

The FHM Engage program, implemented by Chemonics International, aims at strengthening the involvement of private sector actors in the health system and in return improving the health outcomes in nations. FHM Engage focal points do so by improving the functioning of local health markets and encouraging greater private sector engagement.

The new website of the Engage program provides information on current projects, is a communication tool and is a searchable repository for all program related documents.

CSF developed an online content management system for the FHM engage program that assists user in understanding the work done by the program in multiple languages. CSF also provided capacity building trainings to project personnel in order for them to update the website and its contents independently.

Features

- Resource hub for all documents related to the FHM program.
- Tool that assists in strengthening health outcomes by providing information to private sector stakeholders
- Training sessions that ensure the sustainability of the website.

Benefits

- Enabling effective and efficient transfer of information
- Improving search engine optimization
- Easy to use document repository with convenient search options
