MoE Aruba OpenEMIS P0678

Needs Assessment and Gap Analysis with the Department of Education in Aruba

OpenEMIS staff conducted a Needs Assessment and Gap Analysis with the Department of Education in Aruba to better understand education gaps in the country and to begin configuration of OpenEMIS.

With the DEA and the Ministry of Education, Family Policy and Lifelong Learning, OpenEMIS staff aims to support the country in providing electronic access to the most recent education data to enable the government to use data to make informed decisions.

During the in-country mission, OpenEMIS staff met with relevant stakeholders as well as school boards to understand a comprehensive status of education in Aruba. This helped OpenEMIS staff understand that the system will be configured to inform priority areas, including but not limited to, repeaters, languages, state of infrastructure, teacher qualifications and teacher training.

Features

- Needs Assessment and Gap Analysis to understand the context of education in Aruba and to present recommendations for improvements

- Adaptation of OpenEMIS to fit the national context

Benefits

- Increased accessibility, report, and dissemination of normalized EMIS data

- Needs Assessment report to document the findings of the mission and to provide potential solutions to the education gaps present in Aruba
