

UN Women- Mobile Application- PoC

iOS and Android Mobile Application PoC

Features

- Offline Mobile Application
- Multilingualism
- Xamarin based applications
- Complete application PoC

Benefits

- No internet connectivity required
- Country based language configuration

Budget

USD 76,400

UN Women is planning to come up with a mobile application that can be used as a central directory for all necessary information required by under developed country's women for agriculture, education and civil rights & services. The Proof of Concept (PoC) sought to test a basic architecture proposal for the system that would support this goal.

CSF has been contracted to develop and share a proof of concept for the mobile application that will be the central application of further sub applications in it. Application has four sub applications namely: Woman Farmer, Woman in Humanitarian Context, Women Entrepreneur and Women Innovator. UN Women planned to install the application in a low-cost android mobile and will distribute to women in under developed geographical areas for them to have one stop access to all information needed for a better living. CSF developed both iOS and Android version of the application.

Facts

Stakeholders	UN Women
Geographic Area	Global
Time Period	2017- present
Topics	Women Welfare
Tools	Mobile Application iOS and Android
