

UNICEF Cote d'Ivoire Eau Potable P0887

Cote d'Ivoire is Developing a National Reporting and Monitoring System with Education and WASH Sectors

To better monitor progress of the Water Sanitation and Hygiene (WASH) strategic plan, Cote d'Ivoire has brought the second sector onboard to DFA Monitoring.

With support from UNICEF Cote d'Ivoire, DFA Monitoring is facilitating the tracking of data management plans in the Ministère de l'Hydraulique. The application supports the creation of a layered indicator framework, setting baseline values and targets at regular intervals to track progress towards the target.

In 2017, the Ministry of Education of Cote D'Ivoire began working on DFA Monitoring to build its Education Sectoral plan- Plan d'Action du Plan Sectoriel Education-Formation 2017-2020 with a set of indicators to better monitor and disseminate results.

This second phase of work with the Ministère de l'Hydraulique is a part of a larger initiative in Côte d'Ivoire to build collaborative and cross-sectoral national development plans.

Features

- DFA Monitoring to build, track and monitor national development in the WASH sector
- Data Platform to house up-to-date information on WASH in the country

Benefits

- Multi-sectoral strategic planning to build comprehensive and collaborative national development plans
