UNICEF ROSA Learning Assessment [P1420]

Learning Assessment Platform with Custom Knowledge Library, Data Visualization Tools, Discourse Forum

With UNICEF ROSA and the Australian Council of Education Research (ACER), CSF developed South Asia's first regional platform on learning assessments.

As the technical development partner of the Platform, CSF supported the initiative through the design and development of web pages aimed at promoting positive education outcomes.

With an engaging forum and extensive repository of learning assessment documents from national, regional and global sources, the All Children Learning platform is creating an active space for country representatives, national statistical experts, stakeholders and teachers to collaborate and engage with national assessment data.

The platform also contains four online visualization tools that can be customized to show learning assessment results and outcomes in the region. These analyses help to present data for interpretation across geography, equity, learning levels and factors with multiple dimensions.

Features

- Custom WordPress platform development

- Knowledge Library for searching and accessing publications on learning assessment from the national, regional and global levels

- Forum to engage regional and global colleagues on best practices in learning assessment

Benefits

- Online visualization tools to visualize learning assessment outcomes in the region

- Scoping mission to Kathmandu to understand the needs and requirements of the platform

Facts

Stakeholder	UNICEF ROSA
Area	South Asia
Time Period	2019-2020
Topics	Learning Assessment
