

UNESCO Jordan OpenEMIS P1769

Monitoring the Jordanian Education Sector Plan with OpenEMIS Monitoring

The Ministry of Education in Jordan underwent trainings to produce indicators to effectively monitor the national Education Sector Plan with OpenEMIS Monitoring.

In 2019, the OpenEMIS team conducted a series of missions to Amman, Jordan to assist Ministry of Education (MoE) focal points in the monitoring of their education strategic plan (ESP).

The missions focused on technical aspects of OpenEMIS Monitoring and how the application can be used to monitor their education priorities as well as to build and monitor Operational Plans for the next two years.

With MoE focal points and the Queen Rania Center (QRC), the 2-weeks training supported the use of OpenEMIS Monitoring in the country. A follow-up training was conducted for administrative use of the system. The admin training focused on setting up the ESP 2018-2022 in the system and was guided by practical exercises throughout the duration of the week.

Features

- Data collection, management and utilization tools to support research, analysis and reporting.
- OpenEMIS Monitoring to assist in the monitoring and evaluation of the education sector plan.

Benefits

- Enabling the harmonization of EMIS-based reporting across the Ministry of Education
- Supporting the monitoring and evaluation of the Education Sector Plan at national and sub-national levels.
