

UN Women Data Standardization

Better integration for better outcomes

Goal / Outcome / Output / Indicator	Planned / Actual
Goal 1 - Prevalence of FGM/C is reduced in targeted areas of 17 countries by the end of 2017 in line with UNGA Resolution 69/150	Planned / Actual
Indicator 1.1 - 40% decrease in prevalence among girls 0-14 years in at least 2 countries, Number, Total	Planned / Actual
Indicator 1.2 - At least one country declaring total abandonment by the end of 2017, Number, Total	Planned / Actual
Outcome 1.1 - Programme countries enact legal and policy frameworks for eliminating FGM/C which are appropriately resourced and implemented in line with AU and UN Resolutions	Planned / Actual
Indicator 1.1.1 - Number of countries implementing a comprehensive legal and policy framework to address FGM/C, Number, Total	Planned / Actual
Indicator 1.1.2 - Number of countries with budget line to implement legislation and policies to eliminate FGM/C, Number, Total	Planned / Actual
Output 1.1.1 - Policy makers mainstream the commitment to end FGM/C throughout Government	Planned / Actual
Indicator 1.1.1.1 - Number of public policy statements on record to support the elimination of FGM/C (Also please list in the notes the specific names of all the laws, policies, Total	Planned / Actual
Output 1.1.2 - Policy makers increasingly utilize disaggregated data and best practices to enforce law and implement evidence based programmes to progressively eliminate FGM/C	Planned / Actual
Indicator 1.1.2.1 - Number of Joint Programme reports available and disseminated to policy makers and leaders on evidence, policy, Total	Planned / Actual

Features

- Syncing the plan levels of UNInfo UNDAF to the UN Women system
- Exposing API to sync data from UNInfo UNDAF system to UN Women system

Benefits

- Reducing duplicity of effort.
- Chances of errors are lessened since data is added in only one system instead of two

As partnerships between UN agencies become imperative to successful projects, stakeholders are quickly realizing the advantage of a common reporting system.

UN Women, needing the ability to sync details captured through UN Info to the UN Women system, contacted CSF to develop a seamless-data tool to better integrate information between UN bodies.

CSF's solution is an API data standardization to sync the plan levels and data from UNDAF/UN Info to UN Women. The bigger scope of the system alleviates the work of the country offices in reporting, instead requiring reporting in one system whose data would be synced into the UN Women system.

Facts

Stakeholders	UN Women
Geographic Area	Global
Time Period	2017
Topics	Gender
Tools	DFA Monitoring, Development of APIs
Reference	Navin Haram UN Women
Project Administrator	Jeeveeta S. Agnihotri jagnihotri@communitysystemsfoundation.org

Budget

USD	0.09 million
