

UNFPA Capacity Building

Training workshops on FGM Monitoring in WCARO

To help stakeholders use the di Monitoring tool to effectively track progress towards eradicating FGM, CSF organized and conducted a series of trainings.

Across the WCARO region and elsewhere, national governments and UN partners are using data to monitor progress on FGM. UNFPA hosted CSF for two capacity-building workshops in Dakar to train teams from UNFPA-UNICEF, government agencies, and implementing partners from five countries: Senegal, Mauritania, Guinea, Mali, and Burkina Faso. A sixth training was conducted for the Djibouti team in their home country.

Country focal points were trained on how to use the di Monitoring platform, a web-based tool enabling the tracking of development plans. Teams populated the results framework with their key indicators and uploaded relevant documents. The trainings provided an opportunity for countries to learn from each other and discuss complementary national contexts, as well as challenges in collecting data.

Features

- Trained users on di Monitoring, which uses a data-driven results framework organized by outcomes and outputs
- Capacity building workshops conducted in two locations for six countries

Benefits

- Prepared all stakeholders of UNICEF-UNFPA Joint Programme on FGM to use KPIs in a uniform data repository to upload information and access data trends
- Provided a space for country teams to learn from one another in developing frameworks and strategies

Facts

Stakeholders	UNFPA / UNICEF
Geographic Area	Global
Time Period	2015
Topics	Monitoring of FGM in Africa
Tools	di Monitoring
Services	Stakeholder training, technical meetings and training workshops, DI Monitoring framework development
