Public data to monitor childhood development

A public data dashboard on childhood development in Spain to support evidence-based decision-making.

UNICEF Spain, working with the country’s Ministry of Health, Social Services and Equity, has developed an online data repository covering a vast range of indicators on the situation of children in the country.

The data is updated biennially, conforming to a set of indicators compiled by the ministry and using a standardized template for uniform reporting. UNICEF Spain maintains the dashboard using a customized administrator panel.

The website’s statistics and figures are used by government institutions, civil society, donors, and academia to analyze social policies and understand the current state of education, childhood health, family and social environment, and childhood vulnerability.

Features

- Data-driven dashboard organized by child-welfare-centric indicators
- Data available as maps, graphs and tables for easy navigation
- Cross-browser compatibility with no plug-ins required
- Easily downloadable content can be shared in reports

Benefits

- Easy access to child development indicators across the country’s provinces
- Deployment of trend information for key performance indicators from 2004 to 2015
- Data analytics convert large volumes of data into visualizations on critical trends and gaps
- Single platform to visualize key performance indicators spatially as well as graphically

Facts

Stakeholders	UNICEF Spain
Geographic Area	Spain
Time Period	2016
Topics	Socio-economic situation of children
Tools	Dashboard, Admin Panel, database
